

# CSC 2111 Lab 08

## Objectives:

1. Class and Data Abstraction
2. Implement a user defined class
3. Separate Class declaration and definition

## Question 1:

On blackboard, you will find files named “Day.h” and “Question1.cpp”. The header provides the complete declaration for the `Day` class. Without modifying the declaration, complete the methods of the class and use `Question1.cpp` to verify your implementation. The output should match the example below.

### Example 1:

```
Default Constructor: SUN
Thursday Constructor: THU
Added 5 days to Thursday: TUE
Tomorrow is: WED
Yesterday was: MON
Press any key to continue . . .
```
